Orig Pub: Rev. padurilor, 1957, 71, No 1, 18-23.

Abstract: The biology and the distribution in Rumania of the
cerambycid wood-boring beetles *Rhopalopus macropus*
and *Clytus arletis* which settle in the swamp cypress
in addition to inhabiting deciduous species. The
article describes the larval passages of *R. macro-*
pus. In the breeding enclosures containing mater-
ial on which the larvae feed, the ichneumon fly
Perosis albopicta (Pimplinae) also developed.
This is apparently the larval parasite.

TITLE: A New Phase in the Conquest of the Cosmos

PERIODICAL: Stiinta si Tehnica, 1960, Nr 5, Supplement p 1
col 1 3

ABSTRACT: According to a TASS communique of 15 May 1960, the USSR has reached a new phase in its space research on studying and penetrating the solar system and on the creation of manned space ships. Soviet specialists, therefore, launched a satellite-space-ship on 15 May 1960. The orbit of this satellite-space-ship has a perigee of 312 km and an apogee of 369 km. It is able to avoid the dense atmosphere and the radiation zones, which could be dangerous for astronauts. The orbit's inclination, which is

Card 1/3 approx 65° in comparison to the equator, is similar

A New Phase in the Conquest of the Cosmos

to the orbits of all other satellites launched. The satellite-space-ship weighs 4,540 kg without its last-stage rocket. The air-tight capsule weighs 2.5 t and the load, equal to that of an astronaut with all necessary equipment as well as various scientific research apparatuses, fuel and power sources, has a weight of 1,477 kg. The satellite-space-ship transmits scientific data recorded by its research apparatuses. After obtaining the preliminary scientific data, the air-tight capsule will be released from the booster rocket by an order from the Earth and both will descend to the Earth and be destroyed as soon as they reach the zones of the dense atmosphere. The ballistic rockets launched into some region of the Pacific Ocean were used in a preliminary test for a Soviet

Title : Serum Aldolase - Test for Differential Diagnosis of Liver
Diseases.

Orig Pub : Viata med., 1957, 4, No 9, 92-88

Abstract : With the determination in 75 patients of virus hepatitis
and in 25 patients of other diseases of the liver, an in-
crease was established of 7-35, and sometimes of 98%, in
the content of aldolase (an enzyme catalyst in the metabo-
lism of carbohydrates processed by the liver) in serum,
in the course of the second and third week of illness with
virus hepatitis. Determination of aldolase is proposed as
a test for the differential diagnosis of epidemic hepatic
diseases.

SOURCE: Microbiologia, parasitologia, epidemiologia, v. 10, no. 1, 1965, 77-82

TOPIC TAGS: enzyme, serum, biochemistry, hepatitis, epidemiology, nervous system disease, infant disease

ABSTRACT: The authors report on a dynamic, serologic and biochemical study of a group of 66 children with neuropsychic diseases where epidemic hepatitis cases occurred. They found that one third of the patients displayed subclinical anicteric forms. The dynamic enzyme survey was useful in detecting new hepatitis forms and in following up newly detected cases. TITLE: Rapid method for calculating heat losses to the ambient medium in oil industry installations

SOURCE: Petrol si gaze, v. 16, no. 8, 1965, 461-464

TOPIC TAGS: heat loss, pipeline, petroleum industry equipment, heat convection, radiative heat transfer, thermodynamic calculation

ABSTRACT: The authors describe a rapid method for the calculation of heat losses to the surroundings by free convection and radiation from equipment and pipelines. The method involves the use of nomographs constructed by the authors to determine the heat exchange coefficients for free convection and radiation in terms of the average temperature of the item and the surroundings, the difference between the two temperatures, the characteristic length and the emission coefficient for the surface of the heat-losing body. Two numerical examples are given to illustrate the use of the nomograms. Orig. art. has: 3 figures and 8 formulas. [Based on authors' Eng. abstr.] [JPRS: 33,544]

AUTHOR: Pirverdyan, A. M. (Baku).

TITLE: Approximate formula for calculating the inflow of a liquid to an imperfect well. (Priblizhennaya formula dlya pritoka zhidkosti nesovershennoy skazhine).

PERIODICAL: "Izv. Ak. Nauk. Otd. Tekh. Nauk" (Bulletin of the Ac. Sc., Technical Sciences Section), 1957, No.4, pp.126-128 (USSR).

ABSTRACT: Accurate solution of seepage of liquids to the face of imperfect wells is extremely complicated even for the most simple seepage problems. The author describes one such solution. First a new solution is derived for "degrees of opening" approaching unity since it is only for such values that the applied simplifications are naturally valid. Comparison of the results calculated by the approximate formula derived by the author of this paper with experimental data of V. I. Shchurov and those calculated by means of the formula of Masket (1) shows that the derived approximate formula is valid for most cases. The method of solution is analogous to that applied by I. A. Charniy (2) for determining the debit of wells which uncover the seam to a small depth. The included graph shows a comparison of the values calculated according to the here derived formula with those obtained otherwise. There are one figure and 2 Russian

TITLE: The Hydraulic Theory of Imperfect Bore Holes. (K gidravlicheskoj teorii nesovershennykh skvazhin, Russian)
PERIODICAL: Izvestiia Akad.Nauk SSSR, Otdel.Tekhn. 1957, Vol 21, Nr 3, pp 170-173 (U.S.S.R.)
Received: 6 / 1957 Reviewed: 7 / 1957

ABSTRACT: In reference to the work of the author in: Izvestiia Akad.Nauk SSSR, Otdel.Tekhn. 1956, Nr 2 another derivation of the formula there cited is given for liquid influx in an imperfect bore hole because the treatment of the problem from the hydraulic side yields a possibility of determining the solution with precision, whereas the analysis of the approximated method carried out in the earlier work did not offer the same possibility.
The filtration area is divided into two zones:
1.) An inner zone with the radius R_0 . Here the distortion of the stream line is noticeable.
2.) An outer zone in which the motion can be taken as a flat-radial one.
In the outer zone the solution can be found according to the formula for the flat-radial motion. The solution for the inner zone presents the essential difficulty. For this purpose this zone is

Oxidation inhibitor (phosphorus sulfide-terpene reaction product) Rodica Cheltes and Rodica Pirvulescu, Rev. chim. (Bucharest) 8, 82 (1967). The oxidation characteristics of hydrocarbon lubricating oil were improved by the addition of 0.3-3.0% of the reaction product of turpentine (I) (b. 156-60°, d₄²⁰ 0.835-85, n_D²⁰ 1.467-1.476) and P sulfide (II). The product is made by treating a spinule oil soln. of I with finely pulverized II at 120-50° and filtering. Martin Liqueur

 TITLE : Oxidation-inhibiting Additives for Lubricating Oils
 ORIG. PUB. : Rev Chim., 8, No. 11, 1260-74, (1957)
 ABSTRACT : Additives (A) inhibiting the oxidation of lubricating oils (LO) are prepared by adding finely dispersed technical H_2S (1) to a solution of turpentine $d_4^{20} = 0.855-0.865$, $n_D^{20} = 1.467-1.475$, $150-160^\circ \text{C}$ at 0.925 in oil heated to 120° and the temperature is then raised to 150° and held until the completion of the reaction. The product obtained is cooled to $80-90^\circ$ and filtered through a porous plug. The LO (yields 96%) contains (in %) F 1.74 and P 3.01. The addition of the A to

Title : Data Contributing to the Knowledge of the Parasitofauna of Fish of the Southern Bug River.

Orig Pub: Nauk zap. Kiivs'k. un-t, 1957, 16, No 22, 213-226.

Abstract: By the method of complete parasitological dissection, 183 specimens of fish of 10 species were examined. 69 species of parasites were discovered. Detailed tables are given of parasitofauna of each species of investigated fish. For the first time in the Southern Bug, there were noted: *Thelohanellus pyriformis*, *Dactylogyrus auriculatus*, *D. crassus*, *D. solidus*, *Gyrodactylus*.

Bardyshev, I. I. and Piriatsinskii, A. L., The application of the Darmoi method to the analysis of native turpentine. I. On the constancy of the ratios $\frac{(a/p) \cdot (a)_2}{(a)_1 \cdot (a)_2}$. P. 1174.

One must apply the rule of constancy of the ratios with great caution for the analysis of turpentine. Otherwise one may get an incorrect conclusion concerning the number of components in the mixture, and a distortion when determining the quantitative composition of the mixture on the basis of the Biot law, if more than two components in the mixture.
